

LRZ · Presence & Impact

Social Media Dashboard — Written Summary

Prepared by: Likith Bathula **Date:** 16 May 2026 **Period covered:** April 2025 – April 2026

My Approach

Before touching any tool, I spent time going through LRZ's profiles on Instagram, LinkedIn and ArtStation to understand how they actually use each platform. That context shaped every decision I made in the dashboard.

Since I didn't have backend access, everything in this dataset comes from what's publicly visible — likes, comments and shares on each post. I didn't guess at numbers I couldn't see. Where data was missing or unclear, I documented it honestly in the Assumptions Log rather than filling gaps with estimates.

I chose to categorise posts by intent — what the post was trying to do — rather than by format. So a video and a static image both promoting an event go under Summit, not split by format. This felt more useful for stakeholders asking "what kind of content works?" than "what format do they use?"

Engagement Rate is calculated against current follower count since impressions aren't publicly available. It's not a perfect metric but it's an honest one, and I've noted the limitation clearly.

What the data is telling us

A few things stood out immediately when I looked at the numbers.

- **ArtStation is quietly the strongest platform.** It has the fewest post types — literally just artwork — but it drives the highest total engagement of the three platforms. The audience there is focused, professional and clearly responds to quality work. LRZ should treat ArtStation as a priority channel, not an afterthought.
- **Artwork drives almost everything.** About 71% of all engagement comes from Artwork posts. That's not surprising for a creative studio but it confirms that LRZ's audience follows them for the work first and everything else second.
- **Collaborations aren't landing.** On paper, collab posts should bring in new audiences. In practice they're the lowest performing category on both Instagram and LinkedIn. It's worth looking at whether these posts are reaching the right people or whether the content itself needs rethinking.
- **July and August 2025 were the peak months.** Both in terms of posting volume and engagement. When LRZ posts consistently, the audience responds. The drop-off into late 2025 and early 2026 is noticeable — engagement in the first four months of 2026 combined is roughly equal to August 2025 alone.
- **LinkedIn has the most strategic range.** It's the only platform using all six content categories. That makes it the most versatile channel for brand building — not just showcasing work but also attracting talent, documenting event presence and announcing news.
- **X has no presence at all.** No posts found in the entire 12 month period. Whether that's a deliberate call or just something that slipped — it's worth a conversation.

Honest limitations

A few things I want to flag openly:

The engagement rate formula uses current follower count, not the follower count at the time of each post. This means older posts are measured against a larger audience than they actually had — which slightly underrepresents their real performance.

June 2025 has zero posts across all platforms. I couldn't verify whether this was a planned break or just a quiet period, so I've left it as a gap in the data rather than assuming.

ArtStation doesn't show share counts publicly, so shares are recorded as zero for all ArtStation posts. The engagement numbers there are Likes and Comments only.

Recommendations

One thing the data keeps pointing to is that video content and behind the scenes moments get strong responses whenever LRZ posts them — Celebrations and Summit posts consistently outperform regular artwork on a per post basis.

That makes a strong case for a YouTube channel. Not a heavily produced one — just a place for:

- Speed paints and process videos of artwork
- Footage from summits and industry events LRZ attends
- Short clips from celebrations and studio milestones

YouTube also has a compounding effect that Instagram and LinkedIn don't — old videos keep getting discovered. A single good process video can bring in new followers months after it's posted. For a studio trying to reach the right creative audience, that's worth serious consideration.
